Arjun Bhamra

U.S. Citizen | bhamra@berkeley.edu | linkedin.com/in/arjun-bhamra | github.com/abhamra | abhamra.com

Research Interests

(Quantum) compilers, programming languages, and quantum computation

Education

University of California, Berkeley — Berkeley, CA
Ph.D. in Computer Science — *August 2026 – May 2031 (expected)*
(Preliminary) Thesis Topic: Efficient Hardware-Aware Quantum Compilation
Advisor: Prof. John Kubiatowicz

Georgia Institute of Technology — Atlanta, GA
Bachelor of Science in Computer Science, GPA: 3.83 — *June 2022 – May 2026*
Thesis: Synthesizing QFT Circuits in a Basis-Oriented Quantum Programming Language
Advisors: Prof. Tom Conte and Jeffrey Young

Publications

Austin J. Adams, Sharjeel Khan, **Arjun S. Bhamra**, Ryan R. Abusaada, Jeffrey S. Young, and Thomas M. Conte. **"Qwerty: A Basis-Oriented Quantum Programming Language"** *IEEE International Conference on Quantum Computing and Engineering (QCE25).*

Austin J. Adams, Sharjeel Khan, **Arjun Bhamra**, Ryan Abusaada, Anthony M. Cabrera, Cameron Hoechst, Jeffrey S. Young, and Thomas M. Conte. **"ASDF: A Compiler for Qwerty, a Basis-Oriented Quantum Programming Language"** *2025 IEEE/ACM International Symposium on Code Generation and Optimization (CGO '25).*

Research Experience and Internships

UW-Madison Qool Quantum Qompilers Lab — September 2025 – April 2026
Quantum Compilers Researcher with Prof. Aws Albarghouthi — *Remote*

- Implemented key parallelization for QQQ's synthesis-based optimizing quantum compiler WISQ

Georgia Tech CRNCH Lab — July 2023 – Present
Quantum Programming Languages Researcher with Prof. Tom Conte — *Atlanta, GA*

- Aided in the design and implementation of Qwerty, a quantum programming language that moves away from gate-based quantum computing and towards higher abstractions
- Engineered custom ASTs and optimization passes for the Qwerty compiler using the Python AST, C++, and custom MLIR dialects and rewrite passes
- Placed 2nd at the CGO Student Research Competition for **"Type Inference for Qwerty"** by implementing Hindley Milner type inference via a Rust-based AST
- Designed and implemented efficient circuit synthesis for Qwerty's "basis generators", enabling cleaner writing of generic Quantum Fourier Transform (QFT) circuits with recursive structure

IBM Research — May 2025 – August 2025
Research Intern — *Yorktown Heights, NY*

- Designed a new qubit-efficient quantum algorithm for solving the Traveling Salesman Problem
- Leveraged permutation encoding and Pauli Correlation Encoding, along with a K-Means path slicing strategy to reduce qubit overhead by 10x, paving the way for solving utility scale problems on quantum hardware
- Operated on TSPLIB instances orders of magnitude larger than existing hybrid-quantum methods

IBM Research — May 2024 – August 2024
Software Engineering Intern — *Yorktown Heights, NY*

- Developed key components for IBM's Rust-based hardware-level production Quantum Assembly (QASM) quantum compiler that improved speed by 7x and memory usage by 3.5x
- Spearheaded the development of a 85x faster data parsing and caching API for quantum hardware configuration information and waveform data through binary (de)serialization
- Implemented the compiler's intermediate representations (IRs) at the pulse calibration level
- Added additional support for QASM parsing, enabling extensibility and more language coverage

Quantinuum May 2023 – August 2023
Software Engineering Intern *Broomfield, CO*

- Created a Pythonic Domain Specific Language (DSL) to aid internal theory team in parsing code to Quantum Intermediate Representation (QIR) with a 30% improvement in workflow efficiency
- Leveraged the Python Abstract Syntax Tree (AST) to build a high level compiler from custom language to LLVM IR that enables conditional branching on quantum measurements and dynamic circuits
- Added constant folding, constant propagation, method inlining and loop unrolling optimizations which reduced output QIR by 15% for faster compilation

Georgia Tech Computational Physics Lab Aug 2022 – July 2023
Quantum Algorithms Researcher with Prof. Spencer Bryngelson *Atlanta, GA*

- Created two variational quantum algorithms (VQAs) for solving PDEs with Qiskit, etc.
- Expanded upon Variational Quantum Linear Solver (VQLS) and VQE for fluid dynamics applications

Projects

Open Source Contributor to major repositories | *Rust, Python, C++, Lean, Git*

- Pushed multiple fixes for the LLVM Project's MLIR codebase, including better error handling for Intel GPU dialects
- Implemented support for symmetric closures in CSLib's Relation library
- Added necessary quality of life changes for the IBM Rustworkx repository, a Rust-based Python graph library
- Included major feature support for the IBM OpenQASM 3 Parser, a performant parser based on rust-analyzer
- Provided bug fixes and feature improvements for Xanadu's JIT quantum compiler, Catalyst

Verified Randomized Maxcut Approximation Algorithm | *Lean*

- Designed data structures and proof objects to represent MaxCut instances induced by randomized vertex selection
- Created lemmas and theorems to prove random vertex partitions create a $\frac{1}{2}$-approximation in expectation

rs_micrograd: Mini Automatic Differentiation Engine | *Rust*

- Designed an auto-diff engine with Rust based on Andrej Karpathy's Python micrograd engine
- Implemented expression graph-based gradient calculations for efficient neural network backpropagation

Out-of-order Pipelined Processor | *C++*

- Designed a trace-based out-of-order processor simulator leveraging Tomasulo's algorithm, with high throughout and accurate simulation of hardware components
- Implemented Tomasulo's algorithm via hardware such as the Register Alias Table, reorder buffer, and scheduling/dispatch queues

Leadership

Dependently Typed: Programming Languages and Compilers Club | *President* | 2024 - 2026

- Organized/coordinated talks from industry experts, professors, and students
- Gave talks on MLIR, Quantum Programming Languages, and Program Synthesis
- Mentored students in programming languages and compilers as a research field, enabling future success and open communication

Technical Skills

Languages: Rust, Python, Java, C, C++, Lean
Frameworks & Tools: MLIR, LLVM, Git, CMake, Bazel, Qiskit, Pennylane, OpenQASM 3
Concepts: Compiler Design, Quantum Computing, Type Theory, Program Synthesis, Circuit Optimization
